

# 10L tank for AdBlue

- Bergamaschi, with the aim to continuous listening to market demands and issues related to the introduction of new products, has developed a 10L tank dedicated to the containment and use of AdBlue liquid

# 10L tank for AdBlue

- The 10L Supertank model tank is perfectly suited to this purpose thanks to its protruding handle that favors a comfortable grip for emptying and its shape particularly suitable to resist even with light weights
- It is perfectly stackable and the protruding handle improves stability in the stackability
- It also has the option of the level display line (stripe)

# 10L tank for AdBlue

- In order to facilitate the filling operation, an extendable spout adapted to the filling hole of the AdBlue tank is provided
- The spout, supplied separately lying down in box of 200pcs, fits onto the Din51 neck of the tank thanks to a truncated cone coupling
- The raw material used, together with the bellows profile, make the spout more easily foldable and roll-up

# 10L tank for AdBlue

- The tank body has been adapted to allow positioning of the spout on the side for convenient use.
- The space occupied by the hollow that welcomes the spout has been optimized in order to facilitate the label application and not penalize the capacity of the tank
